About me

I'm a **Software Engineer with a strong focus on backend development**, specializing in Laravel and scalable web applications. I have hands-on experience building and maintaining SaaS products, designing RESTful APIs, managing databases, containerizing applications with Docker, and deploying production systems. I focus on writing clean, maintainable code and building reliable software that can grow with business needs.

Work experience

Backend_Engineer- laravel/vue.js | Afkar-altahawal | 01/05/2026 - Current | Tripoli, Libya

Full-Stack Software Engineer

- Contributed as a **Full-Stack Software Engineer**, maintaining existing systems and developing SaaS products and internal software solutions.
- Worked across multiple areas of the software engineering lifecycle, including **development, technical documentation, deployment, Docker containerization, testing, and system maintenance**
- Built and maintained **Docker images** and successfully deployed production systems.
- Participated in **QA and regression testing**, resolving issues and ensuring systems met company quality standards before release.
- Collaborated with internal teams and external service providers to integrate third-party services and implement complete business workflows.

Selected Products

- myhome.ly** — Developed a Libya-focused SaaS platform integrating local SMS providers and external companies such as **Ebtikar** to support payment workflows. The platform used **AI-powered image transformation** to allow users to upload photos of interior spaces and visualize them furnished.
- afkar.ly** — Developed a fully dynamic corporate website with configurable **services and blog sections**, supported by a **Filament admin dashboard** designed for long-term content management and maintainability.

IT lecturer | Attahaddi University | 15/10/2025 - Current | Tripoli, Libya

Lecturer — Information Technology & AI

- Delivered lectures to **non-technical pharmacy students**, introducing fundamental IT concepts and practical digital skills.
- Designed and developed a **custom educational curriculum from scratch**, structured to gradually guide students from limited technical knowledge to confident and independent use of AI in their workflows.
- Taught students how to use and integrate **AI tools and workflows** into their academic studies, daily activities, and future professional work.
- Simplified technical concepts for non-technical audiences through practical examples and hands-on demonstrations.
- Guided students on using AI effectively for **research, productivity, learning, and professional tasks**.

Business or sector Education | Department: Lecturer | Website: <https://attahadi.edu.ly/website/>

freelance | Tripoli, Libya

As a Freelance worked on some projects :

- Developed a **multi-tenant web application** as my graduation project using Laravel, applying modern multi-tenancy architecture and backend development practices.
- Designed and developed my own **SaaS application**, currently being prepared for production release.
- Designed, developed, and deployed several production websites and landing pages for local and international clients.
- Developed **jenkintownsmiles.com** for a dental practice based in the United States.
- Developed **sbt.com.ly** for an alliance of four major companies operating in the Libyan construction market.
- Developed **abraloun.com**, a landing page for a travel and tourism company.
- Developed **afkar.ly**, a corporate landing page for a leading Libyan company.
- Currently developing a **web-based system for a university in Libya**.

Internship | Libyan Technology Foundation | 03/08/2025 - 04/10/2025 | Tripoli, Libya

- Process Automation & Workflow Design:** Designed and built automated workflows using **Power Automate** and **N8N** to streamline business processes, integrating Microsoft Forms with Excel to automate data collection and management.
- Strategic Project & Data Analysis:** Contributed to a corporate expansion project by conducting **market research and analysis** on a new branch location. Gained foundational skills **Power BI** for data visualization.
- Industry Exposure & Site Visits:** Gained practical insights into enterprise-level IT operations through guided site visits and technical presentations at:
- Expert-Led Technical Workshops:** Participated in intensive sessions with industry leaders on a range of advanced topics, including:
 - Financial Technology (FinTech) and modern banking systems.
 - Software deployment principles using **Docker** and containers.
